

M.Sc. in Digital Society

Overview

The Master of Science in Digital Society trains new-age professionals to design, deploy, develop, and research digital technologies for diverse populations across domains like finance, banking, logistics, marketing, governance, healthcare, education, infrastructure, and media. Our graduates are sensitive, aware, and capable, passionate about creating impact for good. They demonstrate expertise in diverse areas such as data analysis, product management, UX design and research, public policy, and social development research.
